

WordPress Plugin Admin UI: Card Grid Edition

Implementation Guide for 20+ Options with Sticky Save Bar & Toggle Switches

1. The Concept

This UI replaces the traditional long-list WordPress settings page with a **2x2 or 3x3 Card Grid**. It utilizes Option A (In-Line settings) for immediate access, custom CSS Toggles for a modern feel, and a Glassmorphism Sticky Save Bar for high usability.

2. PHP Structure (admin-page.php)

Use this structure within your plugin's menu callback function.

```
<div class="wrap">
  <h1><?php echo esc_html( get_admin_page_title() ); ?></h1>

  <form action="options.php" method="post" class="my-plugin-form">
    <?php
      settings_fields( 'my_plugin_options_group' );
      $options = get_option( 'my_plugin_settings' );
    ?>

    <div class="my-plugin-grid">
      <!-- Card 1: General -->
      <div class="my-plugin-card">
        <h3><span class="dashicons dashicons-admin-settings"></span> Core Settings</h3>
        <p>Manage essential engine behaviors.</p>
        <table class="form-table">
          <tr>
            <th>Enable Engine</th>
            <td>
              <label class="wp-toggle">
                <input type="checkbox" name="my_plugin_settings[enable_core]" value="1">
                <span class="wp-slider"></span>
              </label>
            </td>
          </tr>
        </table>
      </div>

      <!-- Card 2: Display -->
      <div class="my-plugin-card">
        <h3><span class="dashicons dashicons-art"></span> Visuals</h3>
        <p>Customize the frontend look.</p>
        <table class="form-table">
          <tr>
            <th>Accent Color</th>
            <td><input type="color" name="my_plugin_settings[color]" value="<?php echo $options['color']; ?>">
            </td>
          </tr>
        </table>
      </div>
    </div>
  </div>
```

```

<!-- Sticky Save Bar -->
<div class="my-plugin-sticky-bar">
    <div class="sticky-bar-content">
        <span>Changes detected in settings...</span>
        <?php submit_button( 'Save All Changes', 'primary', 'submit', false ); ?>
    </div>
</div>
</form>
</div>

```

3. The CSS (admin-style.css)

```

.my-plugin-grid {
    display: flex; flex-wrap: wrap; gap: 20px; margin-top: 20px; padding-bottom: 80px;
}
.my-plugin-card {
    background: #fff; border: 1px solid #ccd0d4; border-radius: 8px;
    padding: 20px; flex: 1 1 calc(50% - 20px); min-width: 320px;
    box-shadow: 0 2px 4px rgba(0,0,0,0.03);
}
.my-plugin-card h3 {
    margin: 0 0 10px 0; display: flex; align-items: center; font-size: 1.1rem;
}
.my-plugin-card h3 .dashicons { margin-right: 8px; color: #2271b1; }

/* The Toggle Switch */
.wp-toggle { position: relative; display: inline-block; width: 40px; height: 22px; }
.wp-toggle input { opacity: 0; width: 0; height: 0; }
.wp-slider {
    position: absolute; cursor: pointer; top: 0; left: 0; right: 0; bottom: 0;
    background-color: #ccc; transition: .3s; border-radius: 20px;
}
.wp-slider:before {
    position: absolute; content: ""; height: 16px; width: 16px;
    left: 3px; bottom: 3px; background-color: white; transition: .3s; border-radius: 50%;
}
input:checked + .wp-slider { background-color: #2271b1; }
input:checked + .wp-slider:before { transform: translateX(18px); }

/* Sticky Bar Glassmorphism */
.my-plugin-sticky-bar {
    position: fixed; bottom: 0; left: 160px; right: 0;
    padding: 15px 30px; background: rgba(255,255,255,0.85);
    backdrop-filter: blur(8px); border-top: 1px solid #ddd;
    z-index: 100; box-shadow: 0 -5px 15px rgba(0,0,0,0.05);
}
.sticky-bar-content { display: flex; justify-content: space-between; align-items: center; max-width:

```

4. CLI Implementation Steps

Step 1: Enqueue your CSS/JS files using `admin_enqueue_scripts`.

Step 2: Use `register_setting` and `add_settings_section` in your `admin_init` hook.

Step 3: Ensure the Sticky Bar `left` margin matches the WP sidebar (160px default, 0px on mobile).
